

7. b) Create an application for platform basic widget which displays icon widget.

AIM: To create a flutter UI application that displays three icon widgets: home, folder and favorite.

PROGRAM: [*icons.dart*]

```
import 'package:flutter/material.dart';

void main() {
  runApp(
    MaterialApp(
      debugShowCheckedModeBanner: false, //optional
      home: Scaffold(
        appBar: AppBar(
          title: const Text("Flutter Icon Tutorial"),
          backgroundColor: Colors.blue,
        ),

        body: Row(
          mainAxisAlignment: MainAxisAlignment.spaceAround,
          children: const [
            Column (
              mainAxisAlignment: MainAxisAlignment.min,
              children: [
                Icon(
                  Icons.home,
                  color: Colors.green,
                  size: 60,
                ),
                Text(
                  "Home",
                  style: TextStyle(fontSize: 18),
                ),
              ],
            ), //close of first column
```

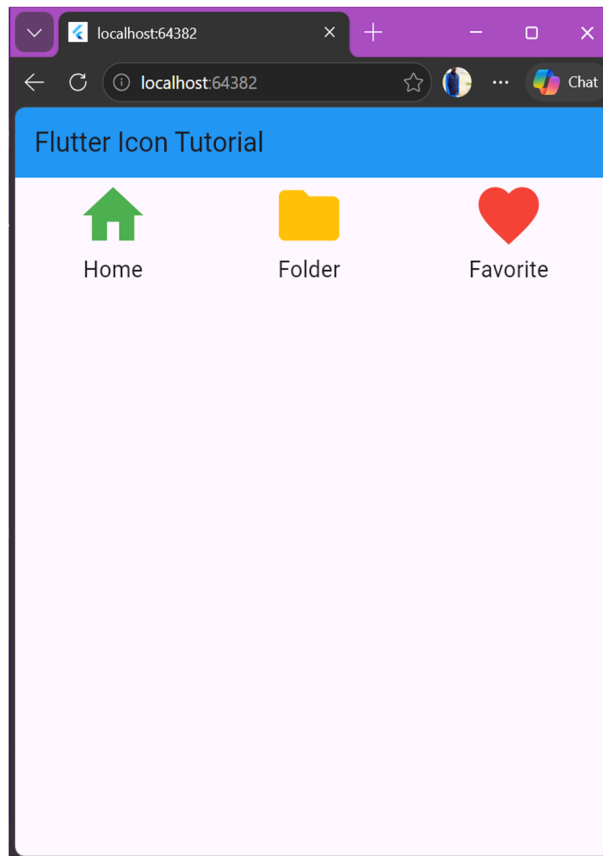

```

Column(
  mainAxisAlignment: MainAxisAlignment.min,
  children: [
    Icon(
      Icons.folder,
      color: Colors.amber,
      size: 60,
    ),
    Text(
      "Folder",
      style: TextStyle(fontSize: 18),
    ),
  ],
), // close of second column

Column(
  mainAxisAlignment: MainAxisAlignment.min,
  children: [
    Icon(
      Icons.favorite,
      color: Colors.red,
      size: 60,
    ),
    Text(
      "Favorite",
      style: TextStyle(fontSize: 18),
    ),
  ],
), // close of third column
], //root children
), //row
), //scaffold
), //materialApp
); //runApp
} //main()

```

RESULT:

EXPLANATION:

S.No.	Code	Explanation
1	<code>debugShowCheckedModeBanner:</code> <code>false</code>	Removes the DEBUG banner from the top-right corner of the application.
2	<code>backgroundColor: Colors.blue</code>	Sets the background color of the AppBar to blue.
3	<code>body: Row()</code>	Defines the main body of the screen. Row arranges its children horizontally.
4	<code>mainAxisAlignment:</code> <code>MainAxisAlignment.spaceAround</code>	Places approximately equal space around each child in the horizontal Row.
5	<code>children: const []</code>	Defines the widgets contained inside the Row. Here, three Column widgets are used.
6	<code>Column ()</code>	Creates vertical group containing an icon and its name.
7	<code>mainAxisSize: MainAxisSize.min,</code>	Makes the Column occupy only the space required by its children.
8	<code>children:</code>	Defines the children of the each Column.
9	<code>Icon ()</code>	Creates an Icon widget.
10	<code>Icons.home</code>	Specifies the Home icon from Flutter's built-in Material Icons.
13	<code>Icons.folder</code>	Specifies the Folder icon.
15	<code>Icons.favorite</code>	Specifies the Favorite/Heart icon.

Week-7(b) Viva Questions & Answers – Flutter Icon Widget

1. What is a widget in Flutter?

Answer: A widget is a basic building block of a Flutter application used to create the user interface.

2. What is the Icon widget?

Answer: The Icon widget is used to display graphical icons in a Flutter application.

3. What is Icons.folder?

Answer: Icons.folder is a predefined Material Icon that displays a folder symbol.

4. What is the purpose of the Row widget?

Answer: The Row widget arranges its child widgets horizontally.

5. What is the purpose of the Column widget?

Answer: The Column widget arranges its child widgets vertically.

6. Why are Row and Column used together in this application?

Answer: Row places the three icon groups horizontally, while each Column places an icon above its corresponding name.

7. What is the use of mainAxisAlignment?

Answer: It controls how the children are positioned along the main axis of a layout widget.

8. What does MainAxisAlignment.spaceAround do?

Answer: It distributes approximately equal space around each child in the Row.

9. How do you change the color and size of an icon?

Answer: Use the color and size properties of the Icon widget.

Example:

```
Icon(  
  Icons.folder,  
  color: Colors.amber,  
  size: 60,  
)
```

10. How do you display text below an icon?

Answer: Place the Icon and Text widgets inside a Column.

```
Column(  
  children: [  
    Icon(Icons.folder),  
    Text("Folder"),  
  ],  
)
```

Most important for viva:

Remember Row = horizontal, Column = vertical, Icon = graphical symbol, and Text = displays the icon name.
